

Linked List - Class 2

Special class

→ L.L → location
→ insert → B → E → M

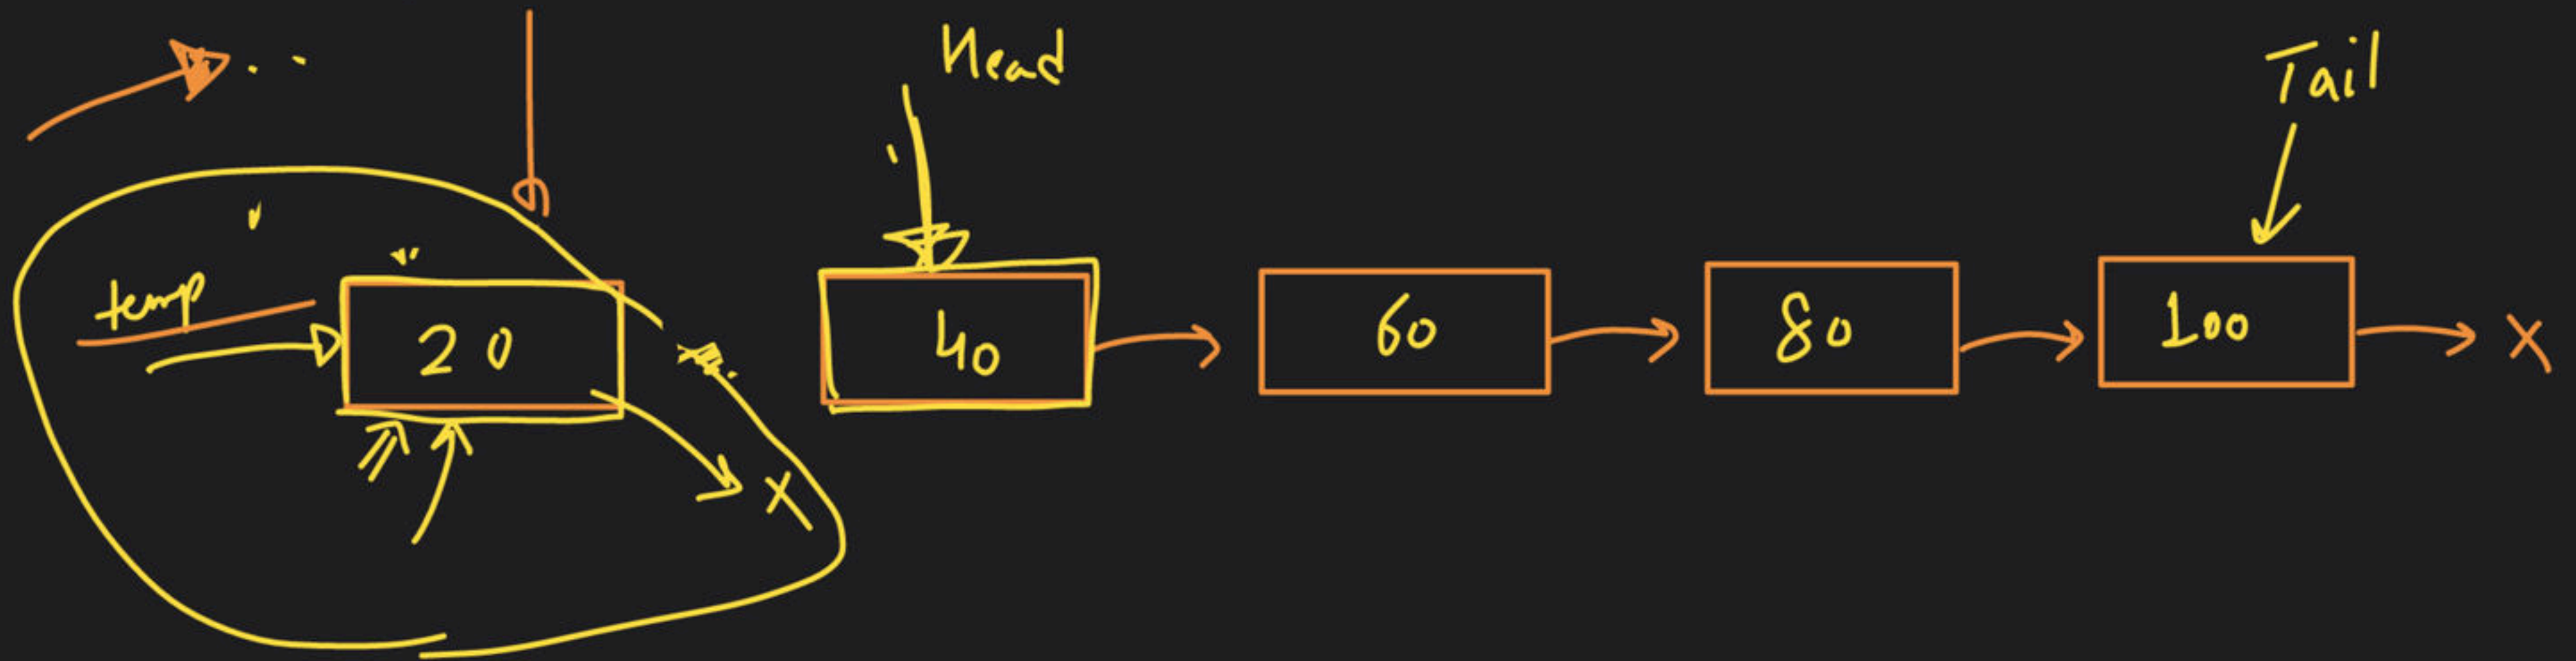

L.L \rightarrow deletion $\left\{ \begin{array}{l} \rightarrow \text{Head} \\ \rightarrow \text{tail} \\ \rightarrow \text{middle} \end{array} \right\} \rightarrow \text{deleteNode}(\text{position})$

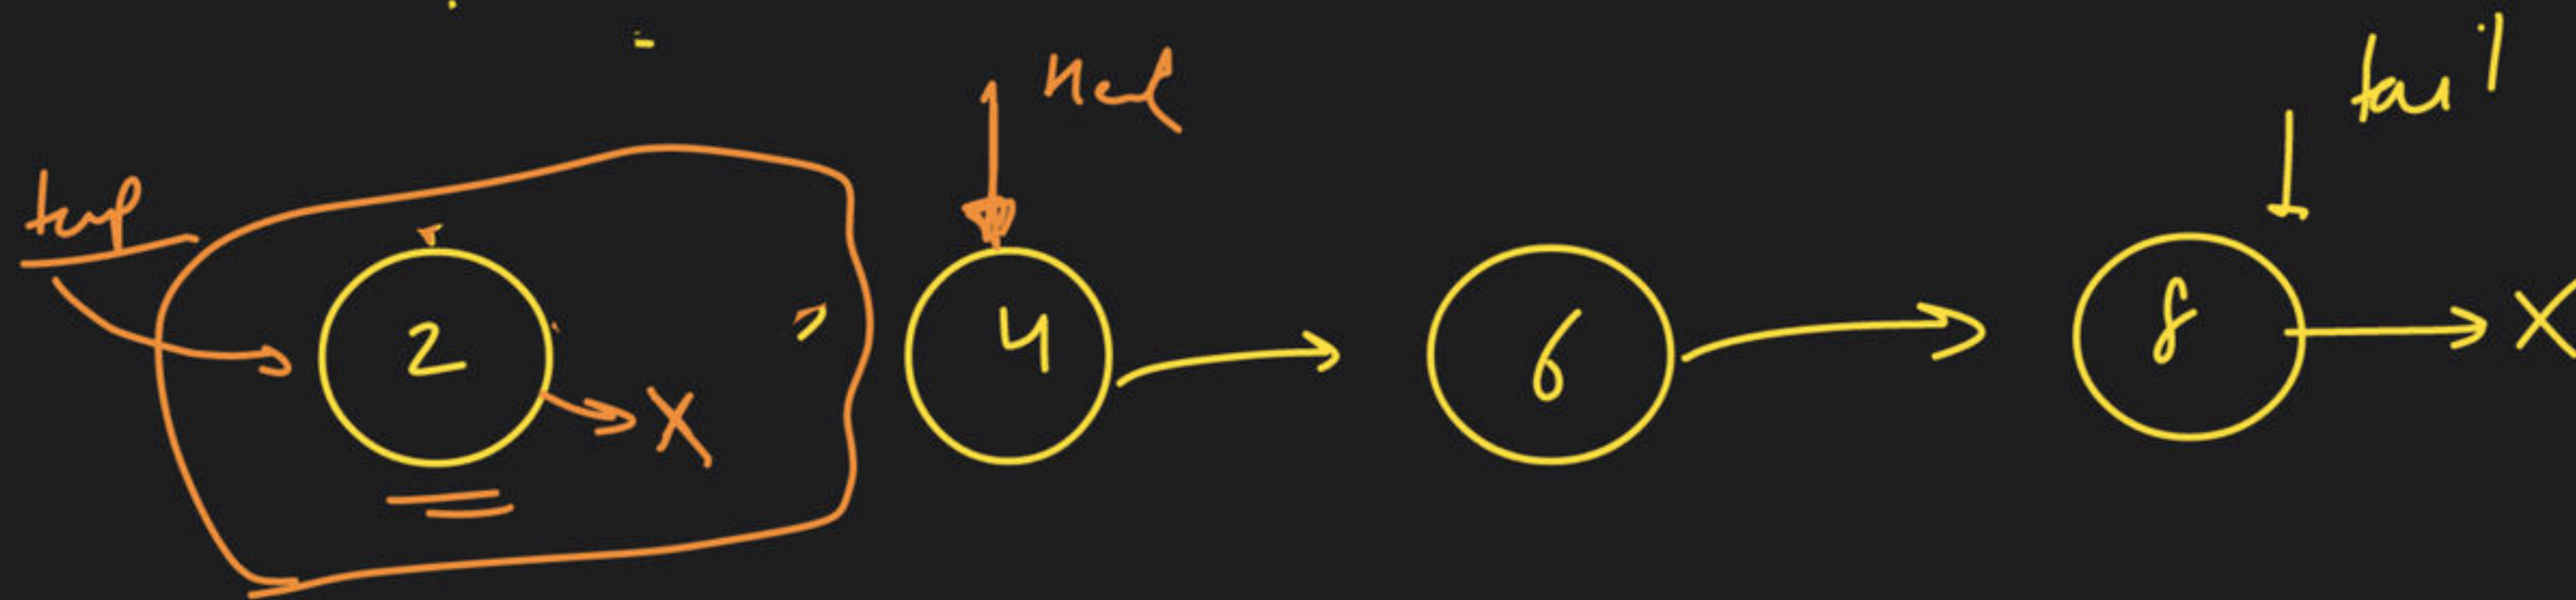

① Empty list \rightarrow $\text{head} == \text{NULL}$

② if ($\text{pos} == 1$) \rightarrow delete from head

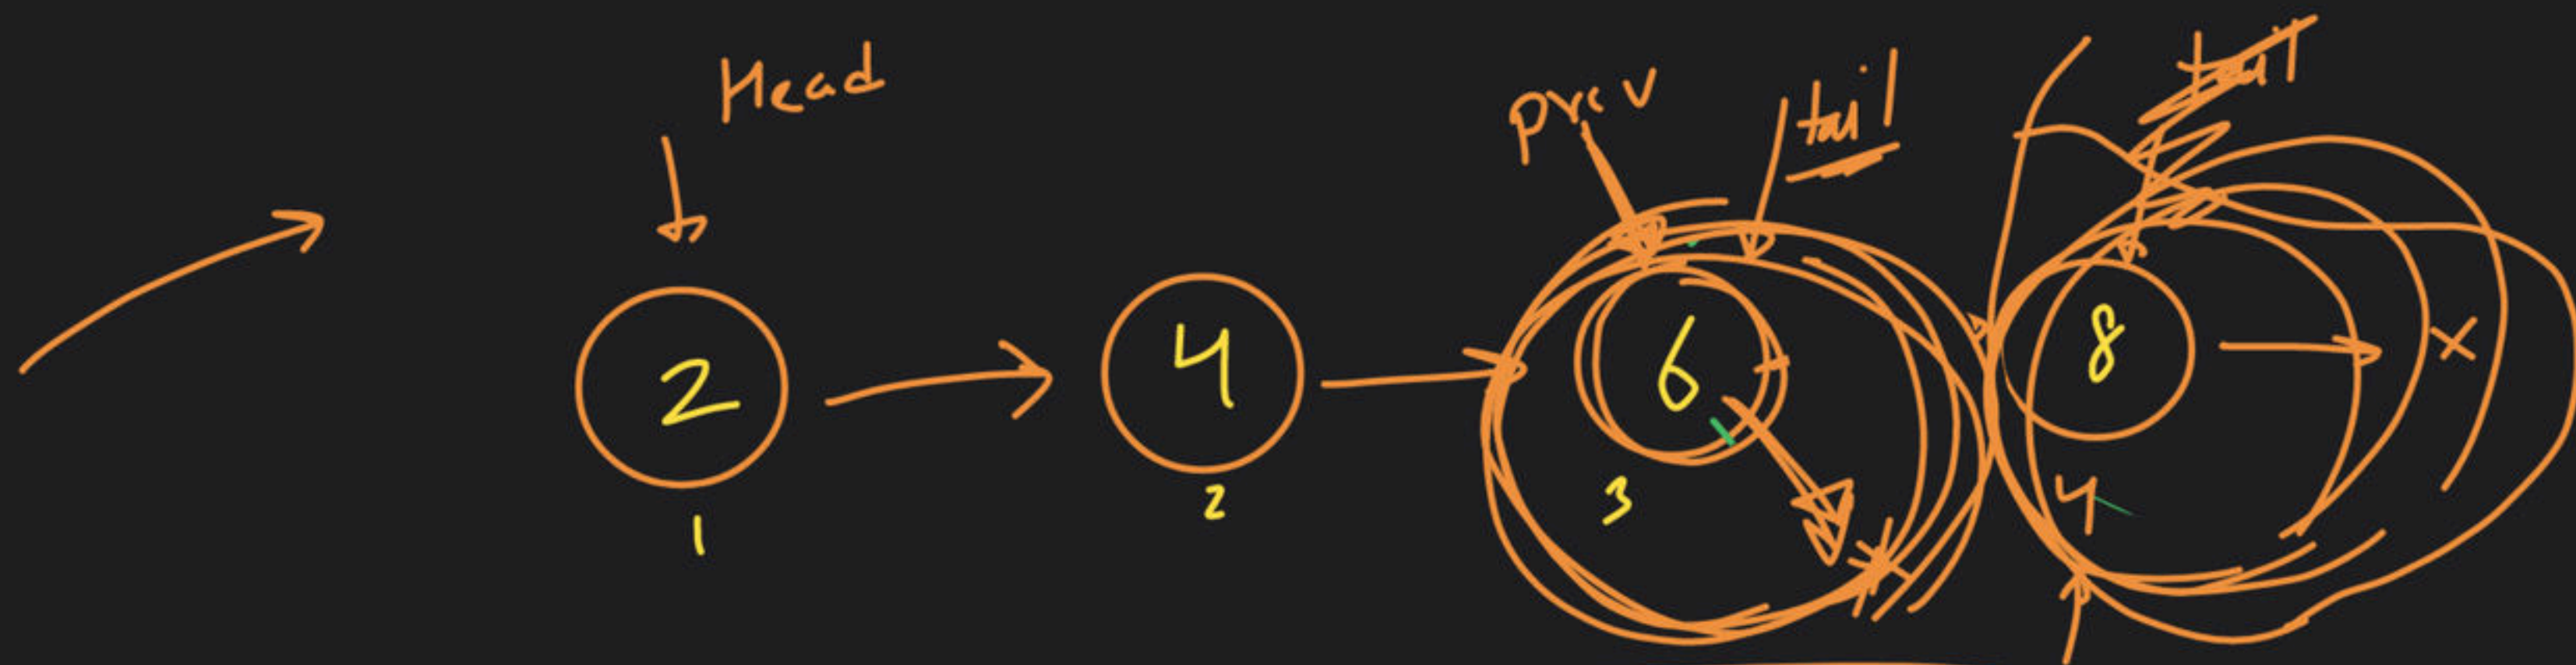

③ if ($\text{pos} == \text{len}$) \rightarrow delete from tail
else \rightarrow middle

- (A) Node *temp = head
- (B) head = temp → next
- (C) temp → next = NULL
- (d) delete temp

- (A) Node * temp = head
- (B) head = head → next //
- (C) temp → next = NULL;
- (D) detach temp

$pos = 4$

- I delete Node
- II node k
prev node \rightarrow NULL
- III tail
update

- (A) traverse second last node \rightarrow prev
 - (B) prev \rightarrow next = NULL
 - (C) delete tail
 - (D) tail = prev
- tail = prev
delete tail

- ① traverse LL for prev/curr
- ② $prev \rightarrow next = curr \rightarrow next$
- ③ $curr \rightarrow next = null$
- ④ delete curr

Node *a = new Node(i);
